February 23, 2007

Rating Transition Matrix for Securitized Products

Rating and Investment Information, Inc. (R&I) has calculated and released its rating transition matrix for securitized products using the rating data up to December 31, 2006. R&I has included securitized products that have a senior/subordinate structure which can be divided into two or more tranches. R&I will continue making the performance of its securitized product ratings openly available in the future, while pursuing further refinements to its data consolidation and improvements in order to provide beneficial investment information based on the characteristics of the securitized products.

1 Methodology

1.1 Securitized products covered

- The securitized products covered are: (1) products that have divided the risk of the underlying assets among two or more tranches by means of a senior/subordinate structure; (2) products for which R&I has assigned a long-term issue rating; and (3) those which R&I is monitoring continuously.¹ Guaranteed bonds are not included.
- Of the securitized products covered, those for which R&I has publicly released a rating² are products that had been assigned a rating as of April 1, 1998 and products that were rated between April 1, 1998 and December 31, 2006. Securitized products with a non-public rating include products that had been assigned a rating as of January 1, 2003 and products that were rated between January 1, 2003 and December 31, 2006.

1.2 Criteria for counting the number of rated tranches

- As a rule, R&I considers all of the tranches having a pari passu ranking³, for distribution of the cash flow generated from the same underlying assets to be one tranche when counting the number of rated tranches (the word "tranche" when used below has this same meaning).
- The tracking start date⁴ for the tranche rating was assumed to be the issue date or trust execution date⁵, and the tracking expiration date⁶ was assumed to be the date when the outstanding tranche balance was repaid.
- In total there were 1709 tranches covered by the survey. This included 898 tranches for which R&I publicly released a rating, and 811 tranches with non-public ratings.

1.3 Rating Transition Matrix calculation method

The Rating Transition Matrix shows how the ratings assigned to a certain tranche have changed over time. R&I calculated the following two different transition matrices by changing the method for setting the observation period.

¹ Securitized products do not include real estate investment trusts (REITs), but do include Government Housing Loan Corporation bonds.

² In addition to securitized products for which R&I publicly announced at the time as an R&I News Release the fact it had assigned a rating, this also includes those products only described in the rating lists on the R&I homepage publicly.

³ When there are multiple tranches each of which provides for lump-sum redemption at different maturity and the cash flow from the underlying assets is distributed in order from the tranche with the earliest redemption date, R&I bundles together products whose redemption method is switched to a pass-through when the servicer is replaced and whose cash flow is distributed proportionately in the same order in accordance with the outstanding tranche balances (so-called soft bullet maturity) and counts them as one tranche.

⁴ For issues organized as a master trust, R&I will assign a rating for the new trust beneficial interest whenever new underlying assets are set up on a trust, but when bundling trust beneficial interests that were assigned ratings at different times into a single tranche based on criterion 1.2 above, R&I used the trust execution date for the first trust beneficial interest assigned a rating by R&I as the tracking start date.

⁵ As used here, trust execution date means the date when the trust was executed for the main underlying assets.

⁶ When bundling trust beneficial interests that were assigned ratings at different times into a single tranche based on criterion 1.2 above, R&I used the longest redemption date as the tracking expiration date.

Rating and Investment Information, Inc. Nihonbashi 1-chome Bldg., 1-4-1, Nihonbashi, Chuo-ku, Tokyo 103-0027, Japan

Ratings are statements of R&I's opinion shown in certain symbols regarding an Issuer's general capacity (credit quality) to repay its financial obligation and individual debts (bonds and loans, etc.) and it is not a statement of recommendations to buy, hold, or sell any securities. Information has been obtained by R&I from sources believed to be reliable, however, its accuracy, adequacy, or completeness is not guaranteed. Therefore, R&I is not responsible for any errors or omissions or the result obtained from the use of the rating. As a general rule, R&I provides the rating services for a rating fee paid by the Issuer.

NEWS RELEASE

< Rating Transition Matrix by Fiscal Year >

R&I calculated the ratings of the tranches covered by the survey at each fiscal year-end, then summarized how the rating distribution conditions at the beginning and end of each fiscal year had changed. In the table below, the ratings arrayed in descending order in the left-hand column represent the ratings at the beginning of the fiscal year. The ratings assigned at the end of the fiscal year are in the columns under the rating headings shown in the uppermost row. For example, at the beginning of the fiscal year, there were a total of 49 tranches with a AAA rating. Of these, 45 still had a AAA rating at the end of the fiscal year, none were rated AA+, one tranche was rated AA and so on, with no tranches rated B-, CCC+ or lower. There were also three tranches that had been redeemed. Like the table for the above matrix, the column for redemptions also includes tranches whose outstanding balance was repaid in full prior to the scheduled redemption date for reasons such as early redemption or repayment as a result of purchase.

Fiscal XXXX	AAA	AA+	AA	. . .	B-	CCC+ or lower	Redeemed	Total
AAA	45	0	1	. . .	0	0	3	49
AA+	0	1	0	. . .	0	0	0	1
.
B-	0	0	0	. . .	0	0	0	0
CCC+ or lower	0	0	0	. . .	0	0	0	0

< Rating Transition Matrix by Months Passed >

This transition matrix summarizes how the distribution of the ratings for tranches covered by the survey had changed corresponding to the number of months passed since the issue date. In the table below, the ratings arrayed in descending order in the left-hand column represent the ratings on the issue date. The ratings assigned *n* months later are in the columns under the rating headings shown in the uppermost row. The figures in the table show, for example, that among the tranches that were still outstanding *n* months after issuance or that had been redeemed during that period, a total of 198 tranches had been rated AAA when issued. Of these, 182 tranches still had a AAA rating after *n* months, one tranche was rated AA+, one tranche was rated AA and so on. None of these tranches had been downgraded to B- or CCC+ or lower. There were also 14 tranches that had been repaid. Like the table for the above matrix, the column for redemptions also includes tranches whose outstanding balance was repaid in full prior to the scheduled redemption date for reasons such as early redemption or repayment as a result of purchase.

After <i>n</i> months	AAA	AA+	AA	. . .	B-	CCC+ or lower	Redeemed	Total
AAA	182	1	1	. . .	0	0	14	198
AA+	0	5	0	. . .	0	0	1	6
.
B-	0	0	0	. . .	0	0	0	0
CCC+ or lower	0	0	0	. . .	0	0	0	0

2 Survey Results

2.1 Rating Transition Matrix by Fiscal Year

The Rating Transition Matrix by fiscal year is suitable for considering what affect the economic environment in each period had on tranche ratings.

By comparing the rating transition situation for corporate bonds and securitized products using the data for the same fiscal year, we can see that the effect differs even under the same economic

NEWS RELEASE

environment. Stated simply, compared with corporate bonds, securitized products exhibit a higher stability of the rating. This proved that by their nature the rating stability of securitized products is higher because credit enhancement corresponding to the cash flow characteristics of the specific underlying assets has been provided.

Furthermore, one can see that securitized products have a higher notching difference⁷ when the rating is changed. Most of the downgrading occurred in CBOs backed by corporate bonds from between 10 to 20 issuers, and it is possible to say that the breadth of a downgrade is greater when the underlying assets are less diversified. The upgrade trend which is more influenced by the passage of time since issuance rather than the effect from the economic environment in each fiscal year, is discussed in the following section.

Although only six years of data from fiscal 2000 through fiscal 2005 is used for the time series (see the appendix at the end of this report), the ratings stability generally may be said to be high.

B+																				
B															3 (0)					3 (0)
B-																		1 (0)		1 (0)
CCC																				
Total	614 (8)	24 (2)	39 (3)	36 (2)	13 (0)	383 (3)	29 (3)	7 (0)	44 (1)	16 (2)		4 (0)	1 (0)		3 (0)		1 (0)			1214 (24)

(The numbers shown in parentheses are the numbers of products that had already been redeemed by the number of months passed.)

Unlike corporate bonds, which are issued by an operating company to raise funds and are backed by the firm's ongoing operations, securitized products are backed by the cash flow generated by specific assets. The credit enhancement level matching that cash flow is evaluated as a rating. Credit enhancement mechanisms vary, but generally changes in securitized product ratings are expected to increase with each passing month because of the tendency for the cash flow and the credit enhancement level to deviate from projections over time.

When we examine the Rating Transition Matrix after 12 months, four ratings had been upgraded to AAA. Two of these actions were exceptions, however, because the agreements covering the underlying assets had been revised substantially. The two other upgrades to AAA, and the upgrade from BBB to A, were securitized products backed by non-performing loans that R&I upgraded at an early stage based on excellent collection performance. Basically the cash flow from the underlying assets does not deviate very much from projections during the initial 12-month period, but the collection performance such as non-performing loans, for example, entails a high degree of uncertainty, and the actual value can easily deviate substantially from the initial expectation.

The upgrade from A- to A and the downgrade from AA- to A+ were credit-linked notes involving a first-to-default swap¹⁰. R&I changed their ratings because the lowest rating of those of the multiple credit link entities had been changed.

The other upgrades were products having relatively shorter maturity, for which credit enhancement level had become relatively higher. In the case of low level of rating, there is a downgrade from B- to CCC zone. There is also an upgrade from B to BB+ after 17 months¹¹.

After 24 months	AAA	AA+	AA	AA-	A+	A	A-	BBB+	BBB	BBB-	BB+	BB	BB-	B+	B	B-	CCC	CC	C	Total
AAA	459 (19)	1 (0)	1 (0)																	461 (19)
AA+	1 (0)	19 (3)																		20 (3)
AA	3 (1)	1 (0)	26 (4)																	30 (5)
AA-				30 (2)	1 (0)															31 (2)
A+	1 (0)				12 (0)															13 (0)
A	3 (1)	1 (0)	1 (0)			254 (7)		1 (0)	2 (0)											262 (8)
A-							24 (4)													24 (4)
BBB+								5 (1)												5 (1)
BBB	2 (1)								23 (2)			1 (0)	1 (0)							27 (3)
BBB-	1 (0)									11 (2)			1 (0)							13 (2)
BB+																				
BB														4 (1)						4 (1)
BB-															1 (0)					1 (0)
B+																				
B																1 (0)				1 (0)
B-																				
CCC																				
Total	470 (22)	22 (3)	28 (4)	30 (2)	13 (0)	254 (7)	24 (4)	5 (1)	24 (2)	13 (2)		5 (1)	3 (0)		1 (0)					892 (48)

(The numbers shown in parentheses are the numbers of products that had already been redeemed by the number of months passed.)

¹⁰ Credit-linked notes involving first-to-default swaps are products where default risk is transferred when the first reference entity among the reference entities defaults.

¹¹ This upgrade result is not on the matrix after 24 months in this report since its elapsed month was lower than 24 months in December 31, 2006

(The numbers shown in parentheses are the numbers of products that had already been redeemed by the number of months passed.)

After 24 months and 36 months, a number of instances of rating downgrades accompanying deterioration in the underlying assets can be noted. These were the CBO issues mentioned above, in which the diversification of the underlying assets was comparatively ineffective because it consisted of corporate bonds issued by only 10 to 20 different issuers. When a corporate bond portfolio offers less diversification, the relative value of the credit enhancement level of the tranche is highly susceptible to the negative effects of a deterioration in the creditworthiness of any one security, with results that are reflected in the rating. But because the credit enhancement level rises relatively as the redemption date nears, even for such CBO issues with less diversification ratings are affirmed in many cases despite deterioration of the creditworthiness of the corporate bond underlying assets, and in fact many have been ultimately repaid without incident.

In the case of well-diversified, effective underlying assets, abrupt changes in the performance of the underlying assets is rare, and there have been no actual cases of rating downgrades for senior tranches. Even when performance had deteriorated somewhat, the relative rise in the credit enhancement level over time was sufficient to compensate for the change.

Under the credit enhancement mechanism, there are tranches for which the credit enhancement level becomes relatively higher over time as well as tranches for which the credit enhancement level remains constant. In general, however, the credit enhancement level will tend to become relatively higher if the performance of the underlying assets remains at the same level as when the tranche was initially issued. The tranches that were actually upgraded extended across a range of products including CMBS, non-performing loans, CDO and ABS. For many of these tranches the cash flow generated by the underlying assets was allocated in order beginning from the highest ranking tranche.

Ratings are statements of R&I's opinion shown in certain symbols regarding an Issuer's general capacity (credit quality) to repay its financial obligation and individual debts (bonds and loans, etc.) and it is not a statement of recommendations to buy, hold, or sell any securities. Information has been obtained by R&I from sources believed to be reliable, however, its accuracy, adequacy, or completeness is not guaranteed. Therefore, R&I is not responsible for any errors or omissions or the result obtained from the use of the rating. As a general rule, R&I provides the rating services for a rating fee paid by the Issuer.

NEWS RELEASE

(Appendix 2) Rating Transition Matrix by Months Passed

After 12 months	AAA	AA+	AA	AA-	A+	A	A-	BBB+	BBB	BBB-	BB+	BB	BB-	B+	B	B-	CCC	CC	C	Total
AAA	610 (8)																			610 (8)
AA+		24 (2)																		24 (2)
